WORK EXPERIENCE

Senior Full-Stack Engineer 2020 – Present

MediaMonks Inc. (Formerly Jam3) · Toronto, Ontario

- Core SWE on Monks.flow. MediaMonks' enterprise agentic AI platform. LLM-driven content generation pipelines and high throughput data ETL pipeline built with NestJS, Redis, Docker, PostgreSQL, Vite, BullMQ and pgvector. Maintained rigorous test coverage across all services.
- Integrated Claude Code into the development lifecycle of Monks.flow to automate complex refactors, generate comprehensive test suites, and accelerate feature iteration across the NestJS and Redis layers.
- Designed and prototyped an AI-powered Speech-to-Text conversational chatbot integrated with a physical hologram display for Skechers, handling real-time audio streaming, low-latency API orchestration, and conversational state management using Deepgram, AWS Step Functions and Amazon Bedrock.
- Tech-led the full site launch of [Zoox.com](https://zoox.com). Owning frontend architecture, backend APIs, headless CMS integration, and cloud infrastructure to deliver a highly optimized experience with 90+ Lighthouse performance and accessibility scores.
- Tech lead on the Oculus Creators platform and Novi.com. Deployed production code to Meta's internal infrastructure as a contingent engineer, adhering to enterprise-level code quality, security compliance, and access-control standards.
- Tech lead on Adidas LA Flagship retail digital experience and Adidas FIFA World Cup experience
- Architected and shipped full-stack solutions for KFC, Burger King and Texas State Technical College.
- IC Engineer for Facebook Marketplace, WhatsApp.com, Oculus.com, and Visa Super Bowl digital experiences.
- Championed monorepo architecture standards and frontend framework best practices across the engineering department.
- Rapidly prototyped and delivered full-stack PoCs for global brands. Validating complex integrations to align cross-functional stakeholders.
- Led co-op recruitment strategy and mentorship programs, growing multiple junior engineers into full-time employees.

Full-Stack Application Developer 2019 – 2020

Palomino Systems Innovations Inc. · Toronto, Ontario

- Designed and implemented a subscription management system with Stripe API (automated renewal and webhook-driven state).
- Orchestrated enterprise data migration for Sterling Capital Brokers across MySQL and PostgreSQL using Laravel-based ETL pipelines.
- Delivered full-stack web applications with Laravel, MySQL, and JavaScript, collaborating directly with stakeholders on requirements and QA.

PROJECTS

Real-Time Collaborative AI Agent workspace

TypeScript · Next.js · NestJS · Yjs/CRDTs · Redis (BullMQ) · Docker · Postgres · Vercel AI SDK

- Built a multi-user, Notion-like document editor with live cursor presence and document conflict resolution using Yjs CRDTs, Redis pub/sub, BullMQ worker queues and strict idempotent reconnect via Postgres

SKILLS

Languages: TypeScript, JavaScript, Python, PHP, SQL, HTML/CSS/SCSS

Frontend: React, Next.js, Vite, React Native, Yjs, TipTap, Zustand

Backend: Node.js, NestJS, GraphQL, WebSocket

Databases: PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, NoSQL

Cloud & DevOps: AWS, GCP, Docker, Terraform, Serverless, AWS CDK, Pulumi, SST

AI: OpenAI GPT, Claude, Gemini, Copilot, Claude Code, Codex, LLM Orchestration, Vector Embedding, Semantic Search

Tools: Git, GitHub, Jira, Postman, Figma, VSCode, Cursor, Bitbucket
